General Information	Aviptadil, also known as vasoactive intestinal polypeptide (VIP), is a 28 amino acid neuropeptide that belongs to the glucagons-growth hormone-releasing factor secretion super family. It plays a special role as it exerts potent anti-inflammatory and immunomodulatory effects. In addition, Aviptadil acts as a potent systemic vasodilator and bronchodilator; it inhibits the proliferation of vascular and bronchial smooth muscle cells and decreases platelet aggregation.
